

Dear Hiring Manager, I am excited to apply for the Full Stack Development Internship at MeetStream AI, inspired by your innovative AI-powered platform. My projects in full stack development includes building responsive front-end interfaces using React, Vite, Next.js, Tailwind, and JavaScript, and integrating AI into Web Apps such as a real-time chat application leveraging Next.js for seamless UI rendering and DialogFlow for NLP. I've developed scalable APIs with Node.js, integrating AWS services like Lambda and S3 to optimize performance in a cloud-based Video Caption Generator using OpenAI API Whisper. I've also explored generative AI tools, such as cursor and windsurf to learn vibe-coding aligning with your use of Cursor (GenAI). To deepen my understanding of professional workflows, I followed an Agile methodology plan generated by ChatGPT to build a Video Caption Generator, incorporating code reviews and debugging to ensure robust functionality. I'm excited to contribute to MeetStream AI's mission to provide APIs for meeting bots to join, record, stream and build agents. Thank you for considering my application. I look forward to discussing how my skills can support your vision.
